SOFTWARE ENGINEER | TECHNICAL TEAM LEAD

Software engineer and technical team lead with 6+ years of experience delivering enterprise software solutions, supporting complex production environments, and leading technical teams. Experienced in API and database development, system troubleshooting, customer-facing technical consulting, and business process automation, with a track record of improving system performance and eliminating manual workflows.

TECHNICAL SKILLS

Languages	: C#, JavaScript, TypeScript, SQL/T-SQL, Java, HTML, CSS
Frameworks	: .NET, React.js
Libraries	: Redux, Swashbuckle, Dapper
APIs & Auth	: REST APIs, SAML, OAuth 2.0, Azure Authorization Code Flow, PKCE
Tools	: Visual Studio Code, SSMS, Git, Azure DevOps

EXPERIENCE

Team Lead Software Solutions

Aras Corporation

October 2022 – Present

Hybrid – Andover, MA

- Led a team of engineers in **Scrum-based support operations**, delegating work assignments, resolving technical escalations, and facilitating cross-department collaboration on complex customer and product issues.
- Resolved **1,000+ customer-facing software tickets** by designing and implementing customized **PLM solutions** based on customer business requirements and translating complex workflows into practical technical implementations
- Debugged and optimized application performance across JavaScript, .NET, and MySQL, analyzing logs, code defects, database behavior, and runtime performance to **identify root causes and implement corrective solutions**.
- Served as the subject matter expert for **CAD functionality**, specializing in CAD conversion, vaulting, and third-party integrations including CAD connectors and APIs such as xPLM and Tech Soft 3D.
- Coordinated technical efforts for **multi-month software upgrade projects**, partnering directly with customers to assess custom functionality, define upgrade requirements, and translate issues into actionable user stories and development tasks.
- Executed **production cutovers** for customer environments, deploying software upgrades and restoring production functionality following multi-month upgrade projects.
- Drove resolution of **high-impact production incidents**, including outages, integration failures, and performance degradation, coordinating live troubleshooting sessions with customers and engineering teams to diagnose root causes and restore production functionality
- Utilized Azure DevOps and internal tooling to **build, configure, and deploy SaaS environments** across local development and Azure-hosted environments.

Junior Software Developer

Cavicchio Greenhouses, Inc.

June 2020 – September 2022

On Site – Sudbury, MA

- Developed and optimized **C# RESTful APIs**, designing and maintaining **SQL tables and stored procedures** while vectorizing existing procedures to reduce execution time by up to **90%**
- Integrated **Azure Authorization Code Flow with PKCE** into APIs and existing web applications, implementing secure employee authentication while eliminating manual IT intervention for application access
- Built a web application integrating the BridgePay API to reconcile credit card transactions between the company's T-SQL backend and BridgePay records, automatically identifying thousands of erroneous transactions and **reducing customer and accounting resolution time**
- Engineered automated **EDI/VMI processing and label-printing applications**, eliminating **5+ hours of weekly manual data entry** and automating hundreds of thousands of print jobs through integrations with major retailers and TEKLYNX Sentinel
- Developed a manager-facing **sales analytics portal** in collaboration with a senior developer, incorporating **ISO date handling and weather data** to analyze departmental sales and replacing Excel reports requiring approximately **10 hours of salesperson labor per week**
